MEMO FOR THE RECORD OF THE CLARK COMMITTEE

Office of Scientific Intelligence

0900-1000 Division and Staff Chiefs Meeting
1000-1200 Intelligence Production Staff
1300-1500 Joint Atomic Energy Intelligence Committee
1500-1600 Chief, Scientific Detachment

1. Intelligence Production Staff

Colonel Miller was interested in how this Division received its direction to embark on specified projects. He asked a number of questions pertinent to this Division's liaison with other offices of the Agency (and the IAC as well).

2. Colonel Miller's questioning, pertinent to Agency publications (not specifically OSI's), has assumed a certain pattern, to wit: said publications are pertinent and prepared by well-qualified personnel, nevertheless, a good proportion thereof are initiated at the whim of the office concerned, and not by the direction of any specific regulation giving that responsibility to a certain office. He feels there should be greater control of schedules for papers produced and reviews of completed projects, prior to publication. This, he feels, should be applied "across-the-board".

3. Colonel Miller would like to know the allocation of OSI's various missions and tasks to the IAC, as a service of common concern. Whereas he feels these responsibilities of other offices concerned are fairly clear and well clarified, he does not feel this is as clearly delineated in OSI's functions.

4. Colonel Miller is satisfied that OSI does not engage in pure research for its own means, but rather is concerned in analysis of finished research.

5. McGruder's interests surrounded rotation of specialists within the IAC for broadening purposes, and sabbatical leaves to bring scientists up-to-date.

6. McGruder made the statement that he feels a lot of paper work is being generated by the Agency, and circulated to those having no need for same. As he put it, "If everybody read everything they received, they would be working sixteen hours a day, and the government would be paying a hell of a lot of overtime!"

7. Colonel Miller again raised two questions previously raised - "Aren't the normal security regulations a little unnecessary when it comes to scientific intelligence and doesn't it hamper the work of scientists", and "What are your relationships with the military and how does it duplicate effort?"
